

PARTS LIST

Trailer socket harness

Control unit

2 Relays

6 Flange bolts, 6 x 16 mm

3 Fuses 20A

2 Fuses 7.5A

Connector clip

Socket bracket

3 Rivet nuts, 6 mm

Subharness kit

**TOOLS AND SUPPLIES REQUIRED**

Phillips screwdriver

Flat-tip screwdriver

Diagonal cutters

Ratchet

10 mm Socket

10 mm Combination wrench

Hex wrench

Rivet nut tool

19 mm Wrench

Illustration of the Trailer Harness Installed on the Vehicle

INSTALLATION

Customer Information: The information in this installation instruction is intended for use only by skilled technicians who have the proper tools, equipment, and training to correctly and safely add equipment to your vehicle. These procedures should not be attempted by “do-it-yourselfers.”

1. Make sure you have the anti-theft code for the audio and navigation system (if equipped).
2. Disconnect the negative cable from the battery.

Removing the vehicle parts

3. Remove the left dashboard side cover (seven clips).

4. Remove the driver's dashboard lower cover (one self-tapping screw, nine clips, unplug one vehicle connector).

Installing the Control unit

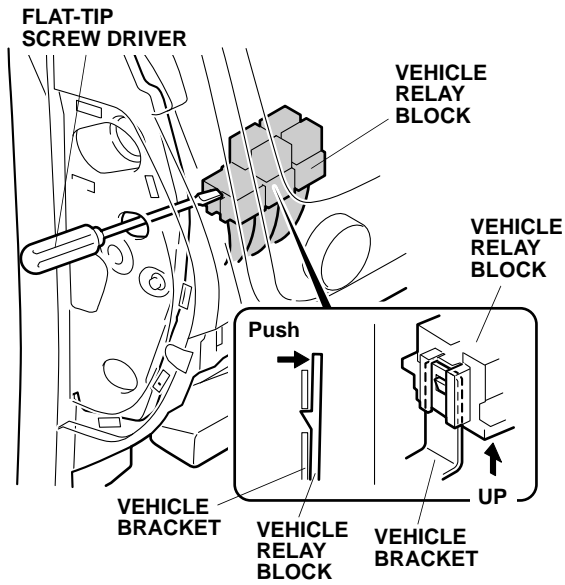

5. Under the dashboard on the driver's side of the vehicle, install the control unit bracket to the vehicle frame with one 6 x 16 mm flange bolt.

6. On the right side of the steering shaft, locate the vehicle 12-pin connector blue-taped and black-taped to the vehicle harness, and remove the blue-tape and black-tape to free the connector.
7. Plug the vehicle 12-pin connector into the control unit 12-pin connector.

Attaching the Relay

- Using a flat-tip screwdriver through the hole in the side of the dashboard, remove the vehicle relay block as shown.

- Attach the two relays into the vehicle relay block, and reinstall the vehicle relay block.

Routing the Trailer Socket Harness

- Under the rear bumper on the left side, remove the green-tape from the connector and pull on the harness to free the vehicle 10-pin connector.

- Thread the rivet nut onto the mandrel of the 6 mm rivet nut tool as shown.

- Insert the rivet nut into the hole in the trailer hitch, and insert the hex wrench in the 6 mm rivet nut tool.

NOTE: Rivet nuts may be a tight fit into the vehicle holes. If they do not slide in easily, use a hammer to tap them into place.

- Holding the 6 mm rivet nut tool with the hex wrench, turn the 19 mm wrench counterclockwise and install the rivet nut to the trailer hitch.

- Remove the 6 mm rivet nut tool from the rivet nut by turning the hex wrench counterclockwise. Install two more rivet nuts in the holes in the trailer hitch.

- Install the socket bracket to the trailer hitch with three 6 x 16 mm flange bolts.

- Install the trailer socket harness to the socket bracket with two 6 x 16 mm flange bolts.

17. Plug the trailer socket harness 10-pin connector into the vehicle 10-pin connector.

18. Install the connector clip into the vehicle 10-pin connector, and push the connector clip and trailer socket harness clip into the holes of the body panel.

Installing the Fuse

19. Under the hood, remove the subfuse box upper cover, and install the three 20A fuses and two 7.5A fuses into the slot in the subfuse box. Reinstall the subfuse box upper cover.

20. Check that all wire harnesses are routed properly and all connectors are plugged in.
21. Reinstall all removed parts. Check that all clips and fasteners are installed securely.
22. Reconnect the negative cable to the battery.
23. Reset the clock, and reset the radio station presets.
24. Put the subharness kit in the glove box.
